Evaluation of Two Unicharge Propellants in the Primary Dermal Irritation Study

EXECUTIVE SUMMARY

In order to assess the potential irritant and/or corrosive effects on the skin of rabbits, bis-(2,2-dinitropropyl) acetal with diphenyl amine stabilizer and bis-(2,2-dinitropropyl) formal without diphenyl amine stabilizer were applied to one intact skin site on each of six rabbits (3 males and 3 females) per study. No signs of erythema or edema were observed at any observation period in any animal receiving bis-(2,2-dinitropropyl) acetal with diphenyl amine stabilizer or bis-(2,2-dinitropropyl) formal without diphenyl amine stabilizer. The studies were terminated following the 72 hour observation period.

Based upon the observations made in the Primary Dermal Irritation Study in rabbits, bis-(2,2-dinitropropyl) acetal with diphenyl amine stabilizer and bis-(2,2-dinitropropyl) formal without diphenyl amine stabilizer were determined to be non-irritants. (Primary Dermal Irritation Index for both test articles = 0.0). The Dermal Irritation Toxicity Category for both test articles is Class IV (mild or slight irritation at 72 hours).

Evaluation of Two Unicharge Propellants
in the Primary Dermal Irritation Study

PH 420-US-001, 002-91

STUDY DESCRIPTION

Sponsor: U.S. Army Medical Research and
Development Laboratory
Fort Detrick
Frederick, MD 21702-5010

Testing Facility: Pharmakon Research International, Inc.
P.O. Box 609
Waverly, PA 18471

Test Facility
Study Conduct
S.O.P. No.: PH-420

Study Numbers: PH 420-US-001-91
PH 420-US-002-91

Purpose of
the Study: To determine the potential irritant and/or
corrosive effects on skin of rabbits.

Ownership of
the Study: The sponsor owns the study. All raw data,
analyses and reports are the property of the
sponsor.

Study Monitor: Major Nathaniel Powell, U.S. Army Medical
Research and Development Laboratory

Study Director: Victor T. Mallory, B.S., RLAT, Pharmakon
Research International, Inc.

Technical
Performance: Thomas O'Neill, B.S., LAT and Kim DiLeo, B.S.,
LAT

O.A.U.
Responsible
Personnel: Leslie J. Pinnell, M.S.

Date Study
Director Signed
Protocols: September 23, 1991

Good Laboratory
Practices
Statement:

These studies were conducted in compliance with the Good Laboratory Practice Regulations. There were no deviations from the GLP Regulations which affected the quality or integrity of the study. Q.A.U. findings from the inspections conducted of this study and from the audit of the final report are documented and have been provided to the study director and the test facility management.

Records
Maintained:

All raw data, final report documentation and protocol will be maintained in the archives of Pharmakon Research International, Inc.

TEST ARTICLES

| TEST ARTICLE | DESCRIP- TION | LOT # | pH | CAS # | DATE SUBMITTED |
|--|------------------|--------|----|-----------|-------------------|
| bis-(2,2-dinitropropyl) acetal with diphenyl amine stabilizer (BDNPA/F+DPA) | yellow liquid | Set #1 | 5 | 5108-69-0 | 9/19/91 |
| bis-(2,2-dinitropropyl) formal without diphenyl amine stabilizer (BDNPA/F-DPA) | yellow liquid | Set #2 | 5 | 5917-61-3 | 9/19/91 |

Analysis of
Purity:

The purity, identity, strength and stability of the test articles were the responsibility of the sponsor.

Stability:

There was no apparent change in the physical appearance of the test articles during administration.

Evaluation of Two Unicharge Propellants
in the Primary Dermal Irritation Study
PH 420-US-001, 002-91

TEST SYSTEM

Species: Rabbit

Strain
(Source): CAMM Research Lab Animals, Wayne, NJ

Sex: Male and female

Age at
Initiation: 8-12 weeks

Weight Range: 1.751 - 2.795 kilograms

No. on Study: Six (6) (three males and three females) per study.

Method and
Justification
for Randomization: Selection of rabbits based upon body weight.

Acclimation
Period: Minimum of five (5) days

System of
Identification: Cage cards were marked with the study number, animal number, dose level and sex. Rabbits were ear tagged.

HUSBANDRY

Research Facility
Registration: U.S.D.A. Registration No. 23-R-107 under the Animal Welfare Act 74: SC 2131 et seq.

Animal Rooms: Separate isolation by test system
Light cycle - 12 hours light, 12 hours dark
Temperature/Relative Humidity - Every attempt was made to maintain a temperature of 20°C \pm 3°C (63-73°F) and a relative humidity of 30 to 70%.

Any excursions outside the temperature or humidity ranges were of small magnitude and/or brief duration and did not adversely affect the validity of the study.

Housing: Rabbits were housed individually in cages, sized in accordance with the "Guide for the Care and Use of Laboratory Animals" of the Institute of Laboratory Animal Resources, National Research Council.

Sanitization: Waste material was removed twice weekly. Cages and feeders were sanitized every two weeks.

Evaluation of Two Unicharge Propellants
in the Primary Dermal Irritation Study
PH 420-US-001, 002-91

Food: Purina Lab Rabbit Chow H.F.^R, ad libitum. Food was checked daily and added or replaced as needed. Feeders are designed to reduce soiling, bridging and scattering.

Food Analysis: There were no contaminants that were reasonably expected to be present in the dietary material known to be capable of interfering with the purpose or conduct of the study.

Water: Fresh tap water, ad libitum.

Water Analysis: Water is monitored for contaminants at periodic intervals according to Standard Operating Procedure PH-018.

METHODS

Rationale for Test System: The albino rabbit is recommended as the preferred species.

Compound Preparation: The test articles were dosed as received.

Dose Administration: 0.5 mL/site

Rationale for Dose Selection: According to the EPA Federal Register, Vol. 50, No. 188, Friday, September 27, 1985

Route of Administration: The test articles were applied directly on the intact skin site.

Rationale for Route of Administration: According to the EPA Federal Register, Vol. 50, No. 188, Friday, September 27, 1985

Frequency and Duration of Administration: Administered once and remained in contact with the skin for four (4) hours.

No. of Animals Per Dose Group: Six (6)

| <u>No. and Code of Dose Group:</u> | <u>Rabbit No.</u> | <u>Dose</u> |
|------------------------------------|---|-------------|
| | 5220-5225 | 0.5 mL/site |
| | [bis-(2,2-dinitropropyl) acetal with diphenyl amine stabilizer] | |
| | 5201-5206 | 0.5 mL/site |
| | [bis-(2,2-dinitropropyl) formal without diphenyl amine stablizer] | |

Length of Studies: Seventy-two (72) hours

Evaluation of Two Unicharge Propellants
in the Primary Dermal Irritation Study
PH 420-US-001, 002-91

Method of Study
Performance:

Approximately 24 hours before the test, fur was removed from the test area by clipping from the dorsal area of the trunk of the animals. Care was taken to avoid abrading the skin. The test substance was applied to a small area (approximately 6 cm²) of skin and covered with a gauze patch, which was held in place with non-irritating tape. The patch was loosely held in contact with the skin by means of a suitable semi-occlusive dressing for the duration of the exposure period. The test substance was kept in contact with the skin site for four (4) hours. At the end of the four (4) hour exposure period, the wrappings were removed. Animals were observed for signs of erythema and edema and scored according to the Draize Scale at 30 to 60 minutes, 24, 48 and 72 hours following patch removal.

RESULTS

No signs of erythema or edema were observed at any observation period in any animal receiving bis-(2,2-dinitropropyl) acetal with diphenyl amine stabilizer or bis-(2,2-dinitropropyl) formal without diphenyl amine stabilizer. The studies were terminated following the 72 hour observation period.

CONCLUSIONS

Based upon the observations made in the Primary Dermal Irritation Study studies in rabbits, bis-(2,2-dinitropropyl) acetal with diphenyl amine stabilizer and bis-(2,2-dinitropropyl) formal without diphenyl amine stabilizer were determined to be non-irritants. (Primary Dermal Irritation Index for both test articles = 0.0). The Dermal Irritation Toxicity Category for both test articles is Class IV (mild or slight irritation at 72 hours).

COMPLIANCE STATEMENT

This study was conducted in compliance with the Principles of Good Laboratory Practices (GLP) as promulgated by the following regulatory agencies.

EPA as stated in the Federal Register, 40 CFR Parts 160 and 792.

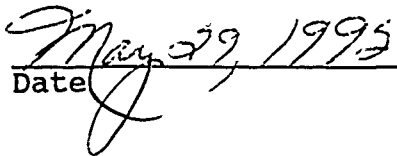

Organization for Economic Co-operation and Development Guidelines for Testing Chemicals (OECD), ISBN 92-64-12221-4, adopted by the council at its 535th meeting on May 12, 1981.

U.S. Food and Drug Administration as stated in 58 CFR Part 21.

Study Nos.: PH 420-US-001-91
PH 420-US-002-91

To the best of my knowledge, this study was conducted in accordance with applicable Good Laboratory Practice regulations; there were no deviations from these regulations that impacted on study conclusions.

Study Director
